Greene Contributes to the National Research Council Report on Transitions to Alternative Vehicles and Fuels

David Greene contributed to the National Research Council (NRC) report on transitions to alternative vehicles and fuels. David's modeling and analysis is found in Chapter 5 of this report and includes estimates for how much could be accomplished towards the goals of 80% reduction of petroleum use and GHG emissions from light-duty vehicles by 2050, and what it might cost. David participated by phone in a DOE press conference regarding the report and the Senate Energy Committee and others received a briefing as well.
